

ENVIRONMENTAL & ENERGY POLICY

Purpose

The Montec management is committed to delivering the highest quality services to the shipping industry with absolute regard for safety and the environment.

Company policy requires that all risks to the environment associated with the global operation of the Company office and vessels are identified and controls put in place in order to ensure that the adverse effects of all emissions and discharges are minimised.

The Company operates a zero-tolerance policy for deliberate discharges in breach of MARPOL. Misuse of the Oily Water Separator (OWS) by any form of tampering and/or the use of by-pass pipes ('magic pipes') is strictly forbidden.

All logbooks, environmental records and working record books must be carefully and accurately maintained and be in agreement where applicable. This includes (but is not limited to) Deck and Engine Room logbooks, oil record books, garbage record books, ballast management records and seal records.

Energy conservation is an essential part of environmental protection, and all vessels are provided with the Company's Ship's Energy Efficiency Management Plan (SEEMP). It is policy that the requirements of this plan are complied with in order to reduce the damaging emissions from burning of fossil fuels. Pollutants such as the oxides of Carbon, Nitrogen and Sulphur emitted to the atmosphere contribute to the effects of greenhouse gases and acid rain. Records of energy conservation are to be maintained and periodically reviewed. Any non-conformities relating to energy conservation shall be identified and corrected.

Through the process of continual improvement of the SMS and development of environmental management skills of its staff, the Company pursues the long-term goal of zero spills to the sea and minimal emissions to the environment. The Company recognizes that operational efficiencies make an invaluable contribution to reducing global carbon emissions and is committed to improving the energy efficiency throughout its operation.

Commitment

Montec is committed to:

- Compliance with mandatory rules and regulations, taking into account codes, guidelines and standards from maritime organisations;
- Actively promoting environmental awareness through training and education;

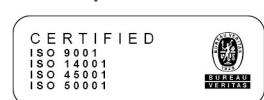

- Operation of its office and ships as efficiently as possible adopting the principles of re-use and recycling;
- Focussing on minimising pollutants at source through effective maintenance and supply of spares;
- We manage our operations and services with openness, effectiveness and accountability and for each energy source and type of technology strive to be the best in class.
- We do our utmost to choose modern, efficient and environmentally effective technologies while making a sound assessment, balancing environment and economy when making investments.
- We prepare vessel specific waste management plan (or) procedure that is regularly reviewed by senior management.
- We have a structured and systematic approach to taking environmental and energy aspects into account, including setting requirements and targets as well performing follow-ups. We handle this as an integrated part of our business management. We assess environmental, social and ethical performance when selecting suppliers, contractors and business partners.
- Practice regular emergency drills and training on-board vessel and develop culture of environmental & energy awareness, personal discipline and accountability through application of integrated management system.
- Ensuring that residual wastes are disposed of in a safe and responsible manner, paying special attention to hazardous waste generated on board;
- Suppliers and contractors working under its direct control and affiliated companies to apply environmental standards consistent with its own;
- Verification of compliance by undertaking regular inspections and audits and rectifying non-compliance.

Company policy is to operate to ISO14001 - Environmental Management System. In addition:

- Environmental objectives and targets are to be set and processes implemented to achieve them;
- Audits are required to ensure that the policy is complied with and that the environmental management system remains appropriate and is capable of adapting to changing circumstances.

Company policy is to operate to ISO50001 - Energy Management System. In addition:

- Committed for availability of information & necessary resources to achieve objectives and energy targets.
- Procurement of energy efficient products and services that impact energy performance.
- If any modification activity company will consider energy performance improvement.

We operate an Integrated Management System in line with ISO 14001:2015 and ISO 50001:2018 to enable us to achieve our commitments.

The ambition for the company is to be fully environmentally responsible within our business areas, and to be recognised for this. This means that:

Our performance in environmental and energy matters is a foundation for a sound business development and for improving our competitive position. We comply with existing laws, regulations and permits.

This policy has been adopted by and signed by the technical director on 15-09-2021. This policy is subject to review during annual management review meeting for continuing suitability.
